

Diego Ruiz Mejorada

Frontend Developer | React & TypeScript

Zapopan, Jalisco · 3311456291 · diegoruiz55@hotmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFILE

Frontend Developer specialized in React and TypeScript, with hands-on experience building offline-first applications, integrating REST APIs, and delivering clean, user-centered interfaces. Proven ability to translate product requirements into reusable components and intuitive user flows, with end-to-end experience taking a project from architecture to deployment. Passionate about contributing to impactful products in collaborative, fast-paced environments where I can grow technically and make a meaningful difference.

TECHNICAL SKILLS

Frontend:	React, TypeScript, React Native, JavaScript (ES6+), HTML5, CSS3, React Hooks, State Management (Zustand, Context API), Responsive Design, PWA / Service Workers
Backend & APIs:	REST API integration, Node.js, Supabase, exposure to Java (Spring Boot) and Django
Databases:	PostgreSQL, MongoDB, MySQL
Cloud & Tools:	AWS (basic), Git, GitHub, Vercel, Postman, Figma
Languages:	Spanish (native), English (Advanced)

RELEVANT PROJECTS

Lift Log — Gym Tracking PWA

React · TypeScript · Zustand · Supabase · Vite PWA

- ▶ Solo-developed a gym-tracking PWA with offline-first architecture for use in low-connectivity environments.
- ▶ Implemented local-first data sync (debounced cloud sync, Service Workers).
- ▶ Designed Row Level Security policies for per-user data isolation; handled the full lifecycle from architecture to deployment.

RideShare UDG — University Ride-Sharing Platform

React · Google Maps API · REST APIs

- ▶ Built reusable React components and UI flows for trip registration, route search, and login, consuming REST APIs built by the backend team.
- ▶ Integrated Google Maps API (origin point, destination, and route rendering), managing map lifecycle with React hooks (useEffect/useRef).

TrafficVision — Real-Time Traffic Dashboard

React · REST APIs

- ▶ Built the real-time dashboard UI, integrating a charting library to visualize live traffic data.
- ▶ Integrated REST APIs into the frontend for live data polling (setInterval), working from a database structure defined by backend teammates.

EDUCATION

B.S. in Computer Science — Universidad de Guadalajara (UDG)

2021 – 2025

Specialization: Software Development · GPA: 9.8 / 10

ACHIEVEMENT

1st Place — UNESCO Youth Hackathon UdeG 2024

Developed a functional prototype addressing a social challenge, applying rapid interface design and interdisciplinary collaboration under pressure.
